## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/29/05 has been entered. Currently, claims 1-27 are pending.

### ***Response to Arguments***

2. Applicant's arguments, see pages 7-11, filed 8/29/05, with respect to claims 1-27, more specifically claims 1, 11, 24, and 25, have been fully considered and are persuasive. The rejection of claims 1-27 has been withdrawn. The examiner agrees that none of the cited prior art references disclose using an under/overprinting map defining a predetermined total percentage of under/overprinting pixels, the map enabling at least one of the additional printheads such that a higher percentage of pixels in the rows corresponding to the defective elements are printed relative to the percentage of pixels printed in the rows corresponding to the functional elements.

***Allowable Subject Matter***

3. Claims 1-27 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The examiner believes that it would not have been obvious to one of ordinary skill in the art at the time the invention was made to combine the utilization of an under/overprinting map to compensate for defective printhead elements by enabling at least one of the additional printheads such that a higher percentage of pixels in the rows corresponding to the defective elements are printed relative to the percentage of pixels printed in the rows corresponding to the functional elements.

The closest prior art reference, previously noted as Neese et al. (US 6302511) discloses system that compensates for defective jets of a jet group by using remaining functional jets to allow a complete raster line to be printed even when defective nozzles from one jet mask are detected. Neese fails to disclose or suggest using an under/overprinting map to enable such compensation. Further, none of the other prior art references that have been cited make up for this deficiency or suggest using an under/overprinting map to compensate for defective printhead elements by enabling at least one of the additional printheads such that a higher percentage of pixels in the rows corresponding to the defective elements are printed relative to the percentage of pixels printed in the rows corresponding to the functional elements.

Therefore, because of these reasons and the arguments presented by the applicant, the claims are rendered allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
